WeatherXL™ is an ideal paint coating for post-frame buildings and components. B&C Metals offer WeatherXL™ in a variety of standard colors shown on this card. These colors are formulated to meet Energy Star® guidelines for steep slope roofs, which means they can decrease the amount of money you spend on energy to cool the building.

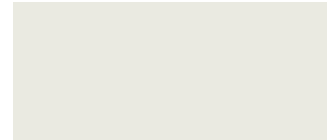

Valspar WeatherXL™ coatings are recognized for their color durability and gloss retention.

WeatherXL™ technology combines durable ceramic and other select inorganic pigments with the strength of Valspar's proprietary silicone polyester resin to fight the detrimental effects of the sun's ultraviolet rays, rain, humidity, and weathering. WeatherXL™ also provides superior abrasion resistance that allows this product to endure the physical abuse of fabrication, transit and construction minimizing cracking or marring.
