Galvalume Plus*

WeatherXL™ is an ideal paint coating for post-frame buildings and components. B&C Metals offer WeatherXL in a variety of standard colors shown on this card. These colors are formulated with solar reflective pigments to reflect the suns rays, which means they can decrease the amount of money you spend on energy to cool the building. Sherwin-Williams® WeatherXL coatings are recognized for their color durability and gloss retention.

WeatherXL technology combines durable ceramic and other select inorganic pigments with the strength of Sherwin-Williams proprietary silicone polyester resin to fight the detrimental effects of the sun's ultraviolet rays, rain, humidity, and weathering. WeatherXL also provides superior abrasion resistance that allows this product to endure the physical abuse of fabrication, transit and construction minimizing cracking or marring.

When installed properly, these products will help reduce energy costs.
Contact B&C Metals or call 1-800-STAR-YES for more information.
